Hi Gang,

I've wrung my hands over this for a while now and my spouse has convinced me (rolling pin in hand) that I should part with it. It is a Hammarlund SP-210-1f receiver and It should have a home where it's gonna get more use than here. It covers 100 to 400 kc and 2.5 ot 20 mHz in five bands. I should tell you that it has be modified (and documented). The entire receiver has been changed to miniature tubes and on board power supplies have been installed. The chassis layout is the same as original, but 6BA6's and 6BE6's are used throughout the RF and IF chain. The BFO, noise limiter and audio use 12AX7A's and 6AQ5's. A complete schematic for the radio also exists, complete with tube pinouts. The B+ regulator circuit and power supplies are solid state. The receiver also works well. It also has a 100kHz calibrator with 25 and 10 kHz divider circuit as well. The knobs are

original and the crystal phasing shaft isn't broken. The front panel has been refinished and the lettering refilled with black paint. The entire receiver has been recapped with ceramic caps and the resistors have been changed out as well. I'd like (not really) to sell this with the doc's, a manual and part of the shipping for \$225.00. Is any body interested? Let me know here or call me at 1-616-677-3706.

Thanks,

KIM
